

JODY FREEMAN

Professor of Law / Director of the Environmental Law Program Harvard University

Professor Freeman teaches Administrative Law, Environmental Law, Legislation and Regulation, and Natural Resources Law, and is Director of the Harvard Law School Environmental Law Program. Her work in environmental law centers on the design of governance institutions, regulatory tools and decision making procedures; most recently, she is working on climate related institutional design. Her scholarship in administrative law focuses on public-private collaboration in governance, regulatory innovation, negotiated approaches to regulation, and privatization. She authored an amicus brief, on behalf of Madeleine Albright, in *MA v. EPA*, the global warming case decided by the Supreme Court this year. Her analysis of the case appears in a new article, *MA v. EPA: From Politics to Expertise*, to be published in the *Supreme Court Review* this year. She recently published an article explaining how state efforts to address climate change can influence federal regulatory strategies (in *Penn L. Rev.* with DeShazo). *Timing and Form of Federal Regulation: The Case of Climate Change*. Her 2006 book, *Moving to Markets in Environmental Regulation*, is a unique collection of essays by leading legal scholars and economists analyzing how well market mechanisms of environmental regulation have performed compared to prescriptive regulation. Freeman co-authors a leading casebook in environmental law, now in its seventh edition and recently agreed to join the 6th edition of a leading administrative law casebook. Professor Freeman consults on administrative law and environmental law issues, and lectures widely both in the U.S. and abroad. Her writings have been translated into several languages; a collection of her papers will be published in China in 2007.
