

# COMMUNICATING CARBON MANAGEMENT STRATEGIES ACROSS SECTORS

## Part I:

Identifying best practices in health care, higher education, community planning, airports and transit.

## Part II:

Exploring the role of cross-sector collaboration and how it can help facilitate better carbon management practices; determining strategies for successful regional collaboration around climate change.

## Findings

- **Organization and leadership within a sector and the ability to create partnerships with other sectors are essential qualities for successful carbon management.**
- **Regional climate change networks can help lead, organize and facilitate partnerships and collaboration between sectors.**

## Summary

**Climate change is a widespread and complicated issue. All sectors of society contributed to the problem; therefore they must all work together to solve it. Regional collaboration can bring sectors together to effectively and efficiently reduce greenhouse gas emissions.**
